

# CONTENTS

– Greetings to the Readers (P. Surján)	iii
– Preface (A. Király, T. Tél)	v
– Socially Responsible Science Education – a Contemporary Pedagogical Challenge (A. Kárpáti)	ix
– Contents	xi
<b>I. INQUIRY BASED SCIENCE EDUCATION</b>	<b>1</b>
– D. Clapp: Bringing Space Science to Life with Mobile Apps, Space Agencies and Hollywood	3
– A. Kárpáti, A. Király: Collaborative, ICTs supported learning solutions for science education based on the SSIBL Framework	9
– I. Szatmáry-Bajkó: Handicraft and aesthetic experience in teaching chaos physics	15
– F. Pols: Real or fake? What can students learn from debunking Hollywood physics?	21
– T. Kovács, M. Kis: How to merge technology and methodology in science and mathematics education – the GEOMATECH Project	29
– I. Döményné Ságodi, A. Dömény: Light pollution measurement: a project work for secondary school students	35
<b>II. SCIENCE CENTRES AND OTHER INFORMAL LEARNING OPPORTUNITIES</b>	<b>41</b>
– D. Featonby: Science on Stage Europe – inspiration for teachers by teachers	43
– M. Kos: Doubtology (Science adventure – an interactive talk)	51
– H. Salmi: Bridging the gap between the formal education and informal learning via science centre pedagogy	53
– J. Vida, J. Vanyó: The Magic Tower of Eger	61
– P. Viladot, E. Stengler, G. Fernández: From fun science to seductive science	67
– E. Stengler, J. Tee: Inspiring pupils to study physics and astronomy at the Science Centre At-Bristol, UK	73
– A. Vörös, Zs. Sárközi: Promoting environmental physics issues in science centers and at science-events	79
– J. Jaloveczki: The motivating role of the full day experimental programme called “Physics show” in teaching physics	85
– P. Mészáros: Fire tornado at the Mobilis Science Center	91
<b>III. ENVIRONMENTAL ISSUES</b>	<b>97</b>
– U. Feudel: Harmful algal blooms in the ocean: an example to introduce high school students to environmental problems	99
– M. Vincze: Modeling climate change in the laboratory	107
– A. Gróf: Carousels to Coriolis. What did you learn in geography?	119
– Á. Bordás: Construction of a quadrocopter for low latitude vertical profile measurements	125
– Á. Szeidemann, Á. Cs. Bodor, M. Juhász: Observation of the drying process in secondary school	131
– I. Gärtner: A few years experience of energy consumption in a high school in Budapest	137

– T. Beke: Simple model for the energy supply of a house using a hybrid wind-solar power system	143
– Z. Csernovszky, Á. Horváth: The notion of energy in secondary schools and the experimental examination of photocells and photosynthesis	149
<b>IV. OUR COSMIC ENVIRONMENT</b>	<b>155</b>
– A. Komáromi: With space research for more lovable physics classes	157
– Á. Lang, Sz. Bérczi, Gy. Hudoba, S. Hegyi: Measuring environmental physics and chemistry by educational Hunveyor and Husar space probe models	163
– M. Pető: Robotics, CANSAT, ARDUINO – physics at Székely Mikó Science Club	169
– Zs. Horváth: Earth's twins? Searching for Exo-Earths	175
– M. Csatóyová: Historical experiment using virtual observation	181
<b>V. SOCIALLY SENSITIVE ISSUES</b>	<b>187</b>
– G. Szabó: Game theory in secondary school	189
– D. Featonby: Colour blindness and science – 50 shades of muddy green intersperced with blues and yellows	199
– I. Scheuring: Scientific program in the summer camp “Bátor Tábor”	205
– B. Leitner: Experiences in teaching game theory in the high school	211
– M. Jávör, T. Geszti: Group decision taking, as viewed through sociophysics	217
– V. Montalbano: Energy, food and sustainability	223
<b>VI. MULTIMEDIA AND ICT</b>	<b>229</b>
– T. Stonawski: New possibilities in physics assignments and in facilitating solutions – the QR Code	231
– Zs. Finta: Complex students' experiments carried out with the help of a smart phone	237
– Zs. Szigetlaki, T. Tóthné Juhász: Computer-aided measurement and simulation using Labcamera and FIZIKA software in physics education	243
– T. Tóthné Juhász: A computer simulation based teaching experiment	249
– C. Fülöp, R. Szabó, T. Berényi, B. Simó: The sledge project	255
– K. Antalné Csorba: Data logging in the science laboratory or anywhere else	261
<b>VII. PHYSICS EXPERIMENTS AND METHODOLOGICAL INNOVATIONS</b>	<b>267</b>
– N. Kazachkova, D. Kazachkova: Three stages of the students research skills development at ECYGDALaboratory	269
– D. Lendvai, M. Czövek: Pendulum wave, or love at first sight	275
– D. Dvorzhitskaia, L. Wemmers, L. Kryvoruchko, A. Geck, H. Derksen, G. Bastian, A. Struck: Video introductions for undergraduate lab experiments: A student-to-student approach	281
– A. M. Tasnádi: From heat pumps to hurricanes: Application of thermodynamics in secondary education	287
– S. Egri, P. Ádám, Gy. Honyek, P. Simon, G. Horányi, F. Elblinger: Methods for teaching physics according to the curriculum framework "A"	293
– T. Tasnádi: Puzzling problems on gravity	299
– M. Vigh, P. Gnädig, Gy. Honyek: Funny motions of billiard balls, rubber balls and hockey pucks	305

– M. Hömöstrei, Á. Beregi: Benefits of IYPT in physics education	311
– M. Kiss: Mikola competition	317
– Cs. Wiener: On the first-year students of the physics teacher training programme at ELTE	323
<b>VIII. CONTEMPORARY PHYSICS</b>	<b>329</b>
– M. Michelini, L. Santi, A. Stefanel: Research based proposals to build modern physics way of thinking in secondary students	331
– Z. Neda: All-pervading light – or how the kinematics of modern physics is based on light	351
– É. Gócz: Simple experiments with semiconductors and LEDs	367
– I. Kuczmann: Coordinate transformation in description of physical phenomena	373
– I. Basa: Application of computer simulations in modern physics education	379
– É. M. Oláh: Let's build particle physics!	385
<b>IX. NUCLEAR ISSUES</b>	<b>391</b>
– A. Aszódi: Nuclear energy and public awareness	393
– C. Fülöp, C. É. Kiss: Physics teachers on teaching the radioactive decay law	403
– M. Kiss: Neutron capture nucleosynthesis	409
– Gábor Náfrádi: Visit to the Maintenance and Training Center at Paks Nuclear Power Plant	415
<b>X. ROUNDTABLE DISCUSSION</b>	<b>421</b>
– Attila Aszódi, David Featonby, Zsolt Fülöp, Hannu Salmi, László Egyed: Roundtable Discussion about Socially Sensitive Issues in Physics Education	423
<b>LIST OF AUTHORS</b>	<b>429</b>
